Sound: 100% DirectX® 9.0C compliant sound card or equivalent onboard sound

Co-Op Play: NVIDIA® GeForce® 8800 cards require 640MB of Video RAM. ATI Radeon™ HD3800 cards require 1GB of Video RAM

English,Czech,Dutch,French,German,Italian,Polish,Russian

saints row 3 nyte blayde outfit. saints row 3 nyte blayde pack. saints row the third nyte blayde pack

Thanks a ton for reminding me that girls hate nerds.

We do all love robots, though.. I think the idea for this game is okay, but the interface for cutting it is bad. the rest is okay, but each beard takes like 30 seconds to cut, and you are on a time limit, so you cant upgrade your store.. Peruspalikkapeli. A very simplistic pay-to-win mobile game that was ported over to the PC platform.

At 3 euros, I still feel like I want a refund.

Stay far away from this game whatever you do.. Five Word Review: Short, decent, ultimately incomplete game.

Favorite Thing: Aside for the stiff animations, everything else was enjoyable.

Least Favorite Thing: The recap didn't help at all. It barely even made sense.

Playtime: ~ 3h

Enjoyment: 6V10

Recommendation: No. The story is incomplete and from a brief look on the forums the next chapter isn't even in development.. I've put in around 10 hours now, so hopefully this enables me to give a helpful overview of the game.

First of all, if you don't have time to read everything, I can honestly say that the game is not worth the current asking price of 50 EUR or your regional equivalent but I can recommended it at a lower price. Hope that helps.

For the rest of you, we can go into a bt more depth. Starting with the positives, I was very impressed with the amount of detail the game goes into - from currency unions to closing the borders the game has plenty of option to sink you teeth into. Where you'll find yourself somewhat frustrated however, is that many of the options are actually 'non-options' depending on the political slant of your party.

When you pick a nation, you are bound to the ruling party and it's politics and thus taking any nation with a clear bias toward the right or left of the political spectrum to the other side - or even the centre - appears to be very difficult. Aside from the effort it can take to push through policies in the face of rebellion within your own party, long term they can actually choose to oust you, regardless of your adherence to democratic principles or your level of popularity.

In my North Korea playthrough I discovered this the hard way. Despite the huge economic and social benefits of opening up the society and my unbelievable 100% popularity rate, my party took me out and shot me at dawn with zero interference from my alleged millions of supporters.

Any significant change, even seemingly for the better can trigger widespread and disruptive protests which don't seem to subside all that quickly, even if you begin to introduce reforms that are being requested.

The interface is clunky at best, the game is not remotely impressive graphically, the voice acting is very off - my North Korean health minister had the most amazing, broad Irish accent - and, in the English version at least, emails and newspaper articles can sometimes make no sense whatsoever.

BUT, it is far from all bad. As stated above, you have a lot of options and can descend into dangerously geeky levels of play. aside from the rarer occasions when your actions trigger unbelievable responses, the game is largely authentic feeling and your actions do have a satisfying weight to them. The ability to fight in real time, or even leave the nitty gritty to the competent military AI, is also very well executed and you have a great choice of options open to you upon victory, from annexation or colonisation of the defeated foe, to a regime change. Borders can be renegotiated and the espionage system is one of the best I've encountered.

Where this game is likely to excel though is in Multiplayer, the range of overt and covert actions you can take to destabilise, attack or prop-up your neighbours is truly wonderful and I suspect even more rewarding when the ally or opponent is a human being.

The raw data used for the core modelling seems pretty solid however, you can break the game and your own immersion from

time to time so certainly do not expect the political modelling to be bulletproof.

Comprehensive modding support is built into the game and I would expect this to be where the biggest strides in improving the game will be made.

In summary, if you have friends to play against or a sincere passion for political simulators then this is worthwhile pick-up, but I urge everyone to wait for it to be on sale or you will feel more than a little taken advantage of. If you are a casual player or are considering this as an impulse buy, I'd suggest giving it a wide berth or picking up the excellent and polished, if far less detailed - Civilization IV or V.

i think FIREFIGHT RELOADED is half life 2 "beta".. Basically just Classic Luxor on Drugs making this installment the greatest overall in the series.. Damn, i love this game!. This Windows game work perfectly for me in Steam Linux, via Steam Play. I Use linux Lubuntu with the Nvidia drivers. In Steam i use the compatibility tool proton 3.7-8. The game start via Steam Play and it work perfectly just like in windows.. It's okay. There's a lot of detail but there is a C36 class that shouldn't be on Queensland Railway track! But every thing is okay.
